DFA Investment Dimensions Group — VA Global Bond Portfolio

Investment Strategy from investment's prospectus

The investment seeks to provide a market rate of return for a fixed income portfolio with low relative volatility of returns. The fund invests in a universe of U.S. and foreign debt securities maturing in five years or less from the date of settlement. It primarily purchases obligations issued or guaranteed by the U.S. and foreign governments, their agencies and instrumentalities, corporate debt obligations, bank obligations, commercial paper, repurchase agreements, money market funds, securities of domestic and foreign issuers denominated in U.S. dollars but not trading in the U.S. and obligations of supranational organizations.

Past name: DFA VA Global Bond.

Category Description: Global Bond-USD Hedged

USD hedged portfolios typically invest 40% or more of their assets in fixed-income instruments issued outside of the U.S. These portfolios invest primarily in investment-grade rated issues, but their strategies can vary. Some follow a conservative approach, sticking with high-quality bonds from developed markets. Others are more adventurous, owning some lower-quality bonds from developed or emerging markets. Some portfolios invest exclusively outside the U.S., while others invest in both U.S. and non-U.S. bonds. Funds in this category hedge most of their non-U.S.-dollar currency exposure back to the U.S. dollar.

Volatility Analysis

Investment

In the past, this investment has shown a relatively small range of fluctuations relative to other investments. Based on this measure, currently more than two thirds of all investments have shown higher levels of risk. Consequently, this investment may appeal to investors looking for a conservative investment strategy.
