NVIT Government Bond Fund — Class II

Investment Strategy from investment's prospectus

The investment seeks as high a level of current income as is consistent with preserving capital. The fund invests at least 80% of its net assets in securities issued by the U.S. government and its agencies and instrumentalities. Many of these securities include mortgage-backed securities. The fund's subadvisor seeks to achieve the fund's objective by investing in securities offering the highest level of expected income while simultaneously minimizing market price fluctuations.

Past name: NVIT Government Bond 2.

Category Description: Intermediate Government

Intermediate-government funds concentrate on bonds backed by the U.S. government or by government-linked agencies. This backing minimizes the credit risk of these funds, as the U.S. government is unlikely to default on its debt. These funds have durations typically between 3.5 and six years. Consequently, the group's performance—and its level of volatility—tends to fall between that of the short government and long government bond categories.

Volatility Analysis

In the past, this investment has shown a relatively small range of fluctuations relative to other investments. Based on this measure, currently more than two thirds of all investments have shown higher levels of risk. Consequently, this investment may appeal to investors looking for a conservative investment strategy.
